

The Path to Automated Narrative Processing

Narrative and the Quest for Human-like AI

Your Name

Your Institution

July 4, 2026

Outline

- 1 Introduction
- 2 The Problem Narrative Processing Solves
- 3 Human Event Processing
- 4 AI Event Processing: State of the Art
- 5 Research Roadmap
- 6 Ethics and Open Questions
- 7 Conclusion

The Central Question

How does narrative figure into human-like AI?

How does narrative figure into the drive towards artificial intelligences that bear comparison to human cognition?

The Central Question

How does narrative figure into human-like AI?

How does narrative figure into the drive towards artificial intelligences that bear comparison to human cognition?

Two existing approaches:

- Narrative computation — analysis of narrative structures
- LLM narrative generation — producing narrative text

The Central Question

How does narrative figure into human-like AI?

How does narrative figure into the drive towards artificial intelligences that bear comparison to human cognition?

Two existing approaches:

- Narrative computation — analysis of narrative structures
- LLM narrative generation — producing narrative text

Neither resembles human narrative processing.

Presentation Overview

This presentation will:

- ① Describe the function of ongoing narrative processing in human intelligence
- ② Consider the state of AI in approximating that functionality
- ③ Offer a research roadmap toward human-like event processing
- ④ Consider ethical implications and limitations

Ongoing narrative processing helps us:

- **Orient** ourselves towards experience

Ongoing narrative processing helps us:

- **Orient** ourselves towards experience
- **Frame** responses to experience

Ongoing narrative processing helps us:

- **Orient** ourselves towards experience
- **Frame** responses to experience
- **Retroactively parse** experience

Orienting, Framing, Parsing

Ongoing narrative processing helps us:

- **Orient** ourselves towards experience
- **Frame** responses to experience
- **Retroactively parse** experience

Key Insight

Narrative is not just a product of cognition—it is an ongoing cognitive process.

What We Know About Human Event Processing

- Event segmentation theory
- Predictive processing in narrative comprehension
- The role of schemas and scripts

Narrative Analysis

- Story understanding systems
- Narrative structure extraction
- Character/event modeling

Narrative Generation

- Large language models
- Story generation systems
- Interactive narrative

Towards Human-like Event Processing in AI

- ① Direction 1: [To be developed]
- ② Direction 2: [To be developed]
- ③ Direction 3: [To be developed]

Contribution to AGI: [To be developed]

Is Embodiment Essential?

Question 1

Is embodiment an essential precondition of narrative processing?

Question 2

Is the “functionality” of narrative processing actually a limitation imposed by processing capacity?

Limitation or Feature?

Question 2

Is the “functionality” of narrative processing actually a limitation imposed by processing capacity?

Corollary

Might artificial systems ultimately transcend that limitation?

- Ongoing narrative processing is central to human cognition
- Current AI approaches don't capture this process
- Research directions exist to bridge this gap
- Important ethical and philosophical questions remain

Thank you!
